About Sherritt International

Sherritt is a world leader in using hydrometallurgical processes to mine and refine nickel and cobalt – metals deemed critical for the energy transition. Sherritt’s Moa Joint Venture has a current estimated mine life of 26 years and has embarked on an expansion program focused on increasing annual mixed sulphide precipitate production by 20% or 6,500 tonnes of contained nickel and cobalt (100% basis). The Corporation’s Power division, through its ownership in Energas S.A., is the largest independent energy producer in Cuba with installed electrical generating capacity of 506 MW, representing approximately 10% of the national electrical generating capacity in Cuba. The Energas facilities are comprised of two combined cycle plants that produce low-cost electricity from one of the lowest carbon emitting sources of power in Cuba. Additionally, its Technologies Group creates innovative, proprietary solutions for natural resource-based industries around the world to improve environmental performance and increase economic value. Sherritt’s common shares are listed on the Toronto Stock Exchange under the symbol “S”.
